PROJECTS

E-ecommerce

Integrated E-Commerce Store

Developed a full-featured e-commerce store using Next.js for the frontend and Strapi as a CMS for the backend.

Key Features:

- Content Management: Dynamic course management via Strapi dashboard.

- Authentication: Secure login and user verification via email.

- API: Comprehensive API for CRUD operations, ensuring efficient data handling.

- Database Integration: Specialized database for cart management.

- Cloud Storage: Images stored on the cloud to optimize performance.

- Email Notifications: Purchase confirmations sent via email.

This project showcases modern web development practices and robust backend integration.

SKILLS

HTML & CSS & SASS

JavaScript

React

Next js

Git & Github

EDUCATION

the literary stream, high school, Damascus

React Projects

- **Prayer Times Website**: Developed a prayer times website with a countdown timer based on city selection. Utilized an API for city-specific data.

- **Weather Information Site**: Created a weather information website, fetching and displaying data from an API.

- **Product Display Site**: Built a site to showcase products, manage a shopping cart,
and interact with an API.

- **Todo List App**: Implemented a Todo List application using Redux for state management and supporting full CRUD operations.
